EDUCATION

Integrated M.Tech – Computer Science & Engineering (Computational Data Science) | Vellore Institute of Technology Oct 2022 – Present
CGPA: 8.07

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL
Frameworks & Libraries: TensorFlow, Keras, Scikit-learn, Pandas, NumPy
Core CS Concepts: OOP, Data Structures & Algorithms, Debugging, Problem Solving
Tools: Git, GitHub, Jupyter Notebook, JupyterLab, VS Code
Expertise: Machine Learning, Deep Learning, Data Analysis

CERTIFICATIONS

- Applied Machine Learning in Python – Coursera / Michigan University

EXPERIENCE

ML Intern | CogniSys AI Private Limited Oct 2025 – Dec 2025
Hyderabad, Telangana

- Worked within the company's AI development pipeline on machine learning projects using Python, contributing to both new development and troubleshooting of existing modules.
- Applied deep learning and data science techniques professionally; demonstrated self-driven work ethic, punctuality, and fast learning in a team environment.
- Collaborated on debugging and improving model performance, gaining experience working across multiple programming paradigms independently.

PROJECTS

Stock Market Sentiment Analysis Using Reddit Data

- Scraped and pre-processed stock-related discussions from Reddit using PRAW (Reddit API); applied data cleaning pipelines with Python and Pandas — mirroring real-world product data workflows.
- Designed and trained an LSTM with Attention deep learning model in Python to classify investor sentiment; showcased end-to-end coding from data ingestion to model evaluation.
- Applied VADER sentiment analysis and TF-IDF vectorization for feature engineering, demonstrating strong analytical and problem-solving skills.
- Evaluated performance using accuracy and classification metrics; code maintained on GitHub for review.

Fake News Detection Using Machine Learning

- Built a Fake News Detection classifier using Passive Aggressive Classifier + TF-IDF Vectorization in Python, demonstrating logical programming and debugging skills.
- Implemented full data pipeline: cleaning, transformation, and model training using Scikit-learn and Pandas — independently designed, coded, and evaluated.
- Evaluated model using Precision, Recall, and F1-Score; project documented and available on GitHub.

Music Recommendation System

- Developed a Collaborative Filtering-based Music Recommendation System in Python achieving over 90% prediction accuracy.
- Pre-processed and cleaned user-item interaction data using Pandas and Scikit-Learn; optimized model with MSE and RMSE metrics — demonstrating OOP principles and algorithmic thinking.
- Self-initiated project demonstrating ability to take initiative and contribute individually on complex technical problems.
